

VOLUFILL

Premium Filler

VOLUFILL

Studies show that hyaluronic acid is excellent at bonding with water molecules, making it a main factor in retaining skin moisture. Skin aging is caused by lack of moisture in the skin, which is why hyaluronic acid can be extremely helpful in re-instilling that moisture and tackling aging skin.

Research shows that hyaluronic acid can effectively hydrate and retain moisture in the skin. Skin hydration is essential for a healthy and glowing complexion. You see, when the top layer of skin lacks water, your skin is unable to maintain an intact skin barrier. Without a strong skin barrier, your skin is more vulnerable to damage from external sources like the environment.

The HA used in the Volufill of products is obtained through biosynthesis, making it safe and non pathogenic for humans. With less than 0.025 IU/mg of endotoxins and less than 2 ppm of protein, it exceeds the highest standard of purity for HA.

Grand

Volufill Grand is the latest injectable monophasic cross-linked sodium hyaluronate gel, technology from equipment to process and from raw materials to finished products, certification standards for injectable sodium hyaluronate gel as to ensure the safety and efficacy of the product while differentiating it from other products in market. Monophasic products are more cohesive and stable than biphasic products, effectively pushing over the tissues and providing significantly better volume restoring of the face than biphasic products

25mg/ml, BDDE crosslinked HA gel, high viscosity

2x2.0ml

27G 13mm needle

Injection Depth Mid-Deep Dermis

Duration 9-12 months

Firm

Volufill Firm has higher viscosity and has longer effects. It's used for very deep lines such as nasolabial folds and oral commissures and nose bridges.

Volufill Firm and Grand are a high viscosity, biodegradable, non animal-based, clear HA gel using Fillaoxane's patented crosslinking process. This process creates a thicker, longer lasting gel that improves the ability to treat deep and more pronounced lines and wrinkles such as nasolabial folds and oral commissures.

25mg/ml, BDDE crosslinked HA gel, high viscosity

2x2.0ml

27G 13mm needle

Injection Depth Mid-Deep Dermis

Duration 9-12 months

Contour

Volufill contour is a high viscosity dermal filler intended for treatment of body rhytides by injecting to the skin.

Contains one sterile, single-use syringe with cross-linked hyaluronic acid gel. Directions for use: this product is intended for administration by qualified medical personnel through injection into the dermis.

- 25mg/ml, BDDE crosslinked HA gel
- 1x10.0ml
- Duration 9-12 months
